Experience

Microsoft Noida
Software Engineer Mar 2025 - Present
Tech Stack: Python, TypeScript, Node.js, React, Docker, Microsoft Azure, Playwright

- Built and scaled platform and infrastructure for multimodal model evaluations across the Microsoft Office experiences.
- Optimized observability platforms to track over **1M telemetry records** for performance and reliability monitoring.
- Owned the Responsible AI release pipeline, improving overall reliability with headless execution, better error handling, and custom retries.
- Made distributed workloads significantly more robust, gracefully handling transient errors and timeouts to hit **99%** infrastructure reliability.
- Migrated to type-safe configuration schemas, dropping config errors by **25%** and streamlining system maintainability.
- Built agentic workflows that automatically detect pipeline failures, investigate root causes, and open fixing PRs, dropping manual triage effort by **95%**.
- Contributed to the internal knowledge base that powers our automated workflows, accelerating team operations and issue resolution.
- Contributed to maintaining WCAG accessibility standards across Microsoft Excel experiences.

Advanced Micro Devices (AMD) Bangalore
System Software Designer Aug 2022 - Feb 2025
Tech Stack: C/C++, Java (OpenJDK), Linux perf, Python, Django, React, SQLite, Docker

- Built a full-stack telemetry platform (Django, React, SQLite) to track nightly OpenJDK benchmarks and isolate performance regressions.
- Automated nightly Java tuning using ML models, cutting manual benchmarking effort by **30%**.
- Profiled and tuned Java workloads using Linux perf to resolve CPU/memory bottlenecks, yielding a **2%** throughput increase on HPC servers.
- Containerized legacy workflows with Docker, dropping deployment and environment errors by **90%**.
- Received the **Spotlight Award** for impact in automation and systems tuning.

Chromium Remote
Google Summer of Code Jun 2022 - Aug 2022
Tech Stack: C++, WebAssembly, WebAudio, WebWorkers

- Engineered a lock-free C++ ring buffer as a reference library for real-time WebAssembly audio streaming.
- Benchmarked multiple concurrency strategies across WebWorkers to optimize high-performance audio pipelines.
- summerofcode.withgoogle.com

Open Source

The Tor Project (Contributor) | Kotlin, Android SDK, XML, Git
- Shipped UI fixes for the Tor VPN Android app, working directly with maintainers through public issue trackers.
- gitlab.torproject.org/tpo

p5.js (Processing Foundation) (Contributor) | JavaScript, HTML5 Canvas, WebGL, GitHub
- Helped debug WebGL and Canvas rendering issues, triaged incoming bugs, and pitched architecture updates for the web editor.
- github.com/processing/p5.js

Skills

Programming Languages: C/C++, Python, JavaScript/TypeScript, Java/Kotlin, Bash, Go, Rust
Frameworks & AI: PyTorch, Azure OpenAI, React/Next.js, Django/Flask, gRPC, WebAssembly
Infrastructure & Data: Kubernetes, Docker, Linux/POSIX, PostgreSQL, Redis, SQLite, WireGuard

Projects

Fastbin: A Code Sharing Webapp | HTMX, Go (Golang), gRPC, PostgreSQL, Docker, Kubernetes
- Built a high-performance code sharing backend in Go utilizing gRPC Protobuf microservices, PostgreSQL with connection pooling and optimized indexing, containerized with Docker and deployed on Kubernetes.
- git.divyam.dev/divyam/fastbin, fastbin.lab.divyam.dev

Homelab | Raspberry Pi 5, WireGuard, Kubernetes, Rancher, MetalLB
- Personal infrastructure hosting containerized services with WireGuard VPN tunneling, MetalLB load balancing, and Rancher-managed Kubernetes, enabling secure, high-availability external access.

Education

Deenbandhu Chhotu Ram University of Science and Technology Haryana, India
Bachelor of Technology (B.Tech.) Computer Science Aug 2018 - Aug 2022
